ASP.Net MVC Core

Assignment

Behnam Faghih

Due date: 5th August 2022

Create a web application demonstrating CRUD (Create, Read, Update, and Delete) functionalities. The topic of your website is based on your choice. You should use ASP.NET MVC Core, SQL Server, and Entity Framework to develop your web application. I suggest using a project with only one Model if you are unfamiliar with the technologies asked to use to develop the web application. Otherwise, a project with several models is recommended.
